PART J: Explanatory Comments

Use this space to elaborate on any section of this form. If more space is needed, provide as an attachment to this form. Provide explanations for any significant changes in trends/numbers from the previous year's report.

Section D totals reflect the initial collection phase of the Missile Defense Agency (MDA) automated on-line "Classified Decision Counting Tool" which was reviewed by the ISOO inspection team in 2-6 November 2015. The initial version (v1) of the tool was deployed for MDA personnel use in September 2015. The totals reported herein, reflect 1 year of sampling collected from 25% of the validated, trained derivative classifiers in the Agency; a multiplier of 4 was applied to estimate the annual total for all Agency Derivative Classifiers. The Original Classification Authority (OCA) decision inputs are actual inputs because there is only 1 OCA in the MDA.

As part of the implementation of the new "Classified Decision Counting Tool", we saturated the population with guidance on what to count vs. what not to count. This increased awareness has resulted in a 28% reduction in the number of classified decisions being recorded by MDA personnel.

The totals reported in Section E and F for MDA's 2015 SF 311 report were improperly filled out. For the 2015 report, Section E, items 23-30 should have been zero, and for Section F, items 33-40 should have been zero. We should only have reported the referrals received by the Agency, as we only receive referred requests. This year's report only includes totals for referrals received by the Agency.

PART J: Explanatory Comments

Use this space to elaborate on any section of this form. If more space is needed, provide as an attachment to this form. Provide explanations for any significant changes in trends/numbers from the previous year's report.

Section D totals reflect the electronic rollout collection of the Missile Defense Agency (MDA) automated on-line "Classified Decision Counting Tool". The totals reported herein, reflect 1 year of sampling collected from 25% of the validated, trained derivative classifiers in the Agency; a multiplier of 4 was applied to estimate the annual total for all Agency Derivative Classifiers. The Original Classification Authority (OCA) decision inputs are actual inputs because there is only 1 OCA in the MDA. We saw a decrease in use of the tool over FY 2017 which we attribute to our guidance on what to count vs. what not to count. In light of the increase in operations tempo as well as a new O&M support contractor, we are in the process of kicking off an education campaign to remind new leadership and new employees of the requirement for the population to use the tool to support completion of the SF 311 tool which is required to accomplish the end of FY 2018 report to ISOO.
